

Adrianus

Informatics Student | Web Developer | Software Engineer | AI Engineering | Cybersecurity Enthusiast

Ciputat, South Tangerang, Banten, Indonesia. adrianusa290@gmail.com |
[08152109708](tel:08152109708) | www.linkedin.com/in/adrianusa290 | github.com/adrianus290 | porotoflio-saya.vercel.app/

Final-year undergraduate student with a strong interest in Full Stack Web Development and Cybersecurity. Experienced in developing web applications using Laravel, React, Django, and Next.js, with hands-on experience in building and integrating REST API and managing MySQL databases. Possesses a solid understanding of developing efficient, scalable, and maintainable web applications. In addition to web development, I have a strong interest in Cybersecurity, particularly Penetration Testing, and continuously expand my knowledge through self-directed learning and hands-on practice with various real-world scenarios. I am a fast learner, adaptable, and capable of working both independently and collaboratively, with a strong commitment to continuous improvement and contributing positively to organizational goals.

Education

Universitas Pembangunan Jaya

Bachelor of Informatics (Currently in Semester 6) | 2023 - Present

SMA Negeri 1 Bengkayang

Social Science | 2020-2023

Relevant Skills

Programming: JavaScript,, Python, PHP, TypeScript, SQL, NoSQL, PostgreSQL, REST API

Development: React, Next.js, VueJS, CSS, HTML, Bootstrap, Django, Laravel, NodeJS, FastAPI

Desktop App Development: TkInter

Database: MySQL

IoT S Embedded: ESP32, Sensor S Actuator Integration, Embedded Systems, IoT Dashboard Control System

Technical: Linux Server Administration, System Troubleshooting, Hardware Diagnostics, Software Troubleshooting Linux CLI.

Machine Learning S AI: PyTorch, TensorFlow, YOLO, Scikit-learn, OpenCV, Pandas, NumPy, Matplotlib

Tools S Workflow: Git/GitHub, Postman, Docker, Windows 7/10/11, WSL , VS Code, Anti Gravity, Arduino IDE, Notion, Burp Suite, AI Tools (ChatGPT, Gemini, OpenCode, Github Copilot).

Other Skills

Soft Skills: Critical Thinking, Problem Solving, Team Collaboration, Independent, Attention to Detail

Productivity: Microsoft Word, Excel, Notion

Design: Canva, Figma, draw.io

Projects

ParkIt – YOLO Based Adaptive Spatial-Gap Parking Slot Classification (2025)

Flutter, GetX, FastAPI, Python, YOLOv12, MongoDB | github.com/adrianus290/Parkit-with-YOLO-and-Dart

- Developed a cross-platform Flutter application with a FastAPI backend to provide real-time motorcycle parking availability and vehicle location tracking.
- Integrated a YOLOv12 object detection model with a custom Adaptive Spatial-Gap Parking Slot Classification (ASB-PSC) algorithm to estimate parking slot availability from spatial gaps between parked motorcycles.
- Built RESTful APIs and MongoDB integration to manage live detection results and synchronize parking occupancy data between the AI backend and mobile application.

YOLOv8-Based AI Waste Classification (2026)

Python, Next.js, Django, Flask, YOLOv8 | github.com/adrianus290/Website-Klasifikasi-sampah-berbasis-AI

- Developed a web-based waste classification system using Next.js for the frontend, Django for the backend, and Flask as the AI inference service, enabling users to upload waste images and receive real-time classification results with prediction confidence scores.
- Developed a web-based waste classification system using Next.js for the frontend, Django for the backend, and Flask as the AI inference service, enabling users to upload waste images and receive real-time classification results with prediction confidence scores.
- Built and integrated REST API between the web application and the AI inference service, enabling seamless communication for image processing, real-time predictions, and result delivery.

Interactive Portofolio Website (2026)

Next.js, Django, FastAPI, JavaScript, Python | github.com/adrianus290/Website-Portofolio-Interaktif

- Developed a modern and responsive portfolio website using Next.js, Django, and FastAPI to showcase projects, technical skills, and professional experience through a dynamic and interactive user interface.
- Designed and implemented a premium user experience featuring glass-morphism UI, dark/light theme, responsive layouts, smooth scrolling, micro-animations, and interactive project galleries optimized for desktop and mobile devices.
- Built and integrated RESTful APIs between the frontend and backend to manage dynamic portfolio content, enabling seamless data communication while maintaining a scalable and maintainable application architecture.

Python Cybersecurity Toolkit (2026)

Python, Request, BeautifulSoup4, JSON | github.com/adrianus290/Python-Cyber-security-toolkit

- Developed a Python-based cybersecurity toolkit to automate security analysis tasks, including TCP port scanning, file hashing, and vulnerability data collection through web scraping.
- Implemented cryptographic utilities supporting MD5, SHA-1, and SHA-256 algorithms for file integrity verification, hash report generation, and secure logging to preserve analysis results.
- Built an automated workflow that integrates port scanning, vulnerability collection from the NVD API and CERT/CC, and execution logging with summary report generation, improving the efficiency and consistency of security analysis.

Academic Information System (2026)

Laravel, React, MySQL | github.com/adrianus290/Sistem-Kampus

- Developed a web-based Academic Information System using Laravel for the backend and React for the frontend to manage campus academic processes for Admin, Lecturer, and Student roles.
- Implemented authentication and authorization using Laravel Sanctum with Role-Based Access Control (RBAC), ensuring secure user authentication and restricting access to system features based on each user's assigned role and permissions.
- Built and integrated RESTful APIs between the frontend and backend to enable secure and efficient data communication, while developing modules for class scheduling, attendance, grade management, and student payment management integrated with MySQL, providing real-time access through a responsive user interface.

Automatic Data Augmentation and Preprocessing Desktop Application (2026)

Python, Tkinter | github.com/adrianus290/Aplikasi-desktop-untuk-Preprocessing-dan-Augemntasi-Otomatis

- Developed a Python-based desktop application using Tkinter to automate image preprocessing for AI dataset preparation through an intuitive graphical user interface (GUI).
 - Implemented automated preprocessing features, including image resizing using Max Pooling and Average Pooling, as well as grayscale conversion and binarization to improve dataset quality for machine learning and computer vision tasks.
 - Designed a user-friendly workflow that enables efficient batch image preprocessing, reducing manual effort and ensuring consistent preprocessing results for AI model training.
-

Certificate

- **Penetration Testing** - by IDN Networkers (2026)
- **Introduction to Cloud Computing** - by Microsoft and Komdigi (2024)
- **Fundamental Keamanan AI** - by Microsoft and Komdigi (2024)
